

SOME NEW MORPHEMES IN PHILIPPINE LANGUAGES

Cecilio Lopez
University of the Philippines

INTRODUCTION

A few years ago I became interested in (a) the reflexes of Dempwolff's doublet reconstructions in the Philippine languages¹ and (b) in non-productive infixes in the Indonesian languages.² To gather the basic data I went through Dempwolff's three volume work (Vergleichende Lautlehre.).³ In the process of gathering the data, some of Dempwolff's reconstructions called to mind equivalents in the Philippine languages which are not reflexes of his reconstructions.⁴ My curiosity was aroused and simultaneous with the data I was gathering for (a) and (b) above, I made a list of the equivalents which I came to in a random manner and by accident. This list is the subject of this paper which, at this stage, makes no claim to exhaustiveness. And it is not the intention either to use a diagnostic vocabulary.

These equivalents in the Philippine languages which are not reflexes of Dempwolff's reconstructions, I now call new morphemes.⁵ I went further and looked up their cognates in non-Philippine Indonesian languages. These cognates are grouped under NPL (Non-Philippine Languages) to distinguish them from the group under PL (Philippine Languages). This distinction is

purely geographic. The purpose of this paper is to furnish data which may serve to explore the possibility of reconstructing forms additional to Dempwolff's Ur-Indonesisch (=PIN) where the cognate new morphemes occur in both PL and NPL, and additional Proto-Philippine (PP) forms, where the cognates occur only in PL.⁶

All in all, I have examined some 87 languages and dialects,⁷ 27 in the PL with A Comparative Philippine Word-List as the main source, and 60 in the NPL based on printed sources. Not all 87 languages and dialects, understandably, are attested in the 41 meanings in the LIST. Those which are represented are enumerated in the ABBREVIATIONS (of languages and dialects attested).

The guide words in the LIST, numbered in alphabetic order, are meanings in English which are my translation of Dempwolff's glosses (Austronesisches Wörterverzeichnis) followed by PMP in Dyen's symbols for orthographic convenience. The LIST includes morphemes which are the reflexes of Dempwolff's reconstructions as well as the new morphemes in the PL, but in NPL only the new morphemes are included.⁸ The cognates, homosemantic⁹ or not, are grouped together after small letters. In some cases the grouping may not stand close formal and semantic scrutiny, but it is attractive and perhaps justifiable - if only tentatively - because the morphemes are new morphemes.

In the PL only those morphemes are listed which occur as cognates among themselves in at least two languages. A morpheme

which occurs in only one Philippine language is also included, provided it has a cognate in the NPL. Conversely, in the NPL a morpheme is listed even if it occurs in only one language, provided it has a cognate in the PL.

SOURCES

For Philippine Languages

The A Comparative Philippine Word-List, a manuscript which includes about 2,500 items in 27 languages with Dempwolff's Vergleichende Lautlehre (III Austronesisches Wörterverzeichnis) used as basis. The bulk of the items in this Word-List was elicited from student informants supplemented by printed sources which are not enumerated here because these will be incorporated in the Word-List when this is published. The coverage is uneven, particularly in the minor languages, because students did not continue to enroll in courses in Philippine linguistics, some dropping out after one or two terms. For the interpretation of the data, I alone am responsible.

CONVENTIONS

The morphemes in the PL and the NPL are in broad phonemic transcription. Dempwolff's single vertical line is replaced by a hyphen in 39.

Ivt and Cha(I) n is palatal n (1 PL d, 9 PL a; 6 NPL). Akl l represents a dorso-lateral fricative (2 PL b, etc.). ch in Ivt (7 PL c, 25 PL a), Btk (12 PL c), Tao (26 PL a), and PNeg (30 PL a), and ts in Ata SAta and Sed (28 NPL) are equivalent; they both represent unvoiced affricate. z in SAta (24 NPL) has perhaps the

same value as the z in Fav (7 NPL), which is the IPA symbol, but the z in CAta (24 NPL) is voiced retroflex fricative. Ata q (25 NPL) is uvular, not glottal, stop. The sequence of two identical consonants in PL Ibg Ilk Ita Png Sag and Tao represents a long consonant. The sequence of two identical vowels represents a long vowel in Tao (4 PL a, 11 PL b). A consonant followed by y is palatal consonant; a consonant followed by w has a labial release, that is, w stands for the onset of a labial release of the preceding consonant. Mnj e is open e (25 NPL), Von o is open o (25 NPL). Itb x is voiced velar fricative (37 PL a). Sir -ck (37 NPL) is as cited in the source (Ferrel 1969, p. 101).

In PL when the stress falls on the penult it is not indicated.

SUMMARY OF NEW MORPHEMES WITH RECONSTRUCTIONS

Assuming that they are not formally and semantically discrepant, the morphemes are grouped together followed by reconstructions by Costenoble (C) and Lopez (L). (C)'s gloss, which is my translation in English, follows his reconstruction. If his gloss is identical with the meaning in the LIST, it is not written. Tentatively, my reconstructions are not glossed; it is assumed that the meaning is identical with that in the LIST. Where (C) and (L) reconstructions and glosses are identical, they are followed by (C, L). (L) standing alone means that (L)'s reconstruction is identical with (C)'s. Where to (L) the etymon is unstatable, the reconstruction by (C) stands alone, if (C) has one, or it is so stated. The reconstructions will be discussed in detail in a later more technical paper in another journal which

the Department of Oriental Languages and Linguistics plans to put up shortly. The reconstructions follow Dyen's orthography, with (C)'s likewise converted thereto.

N O T E S

1. Data organized.
2. Almost finished.
3. O. Dempwolff, Vergleichende Lautlehre des austronesischen Wortschatzes.
4. In my manuscript on A comparative Philippine word-list.
5. Suggested by Dyen in a conversation, summer 1967, when he was in the Philippines.
6. In 1910 appeared C. E. Conant's 'The RGH law in Philippine languages,' JAOS 31.70-85, and in 1912 his 'The pepet law in Philippine languages,' Anthropos 7.920-47. In his two papers Conant reconstructed only a few Philippine prototypes, and of those he did in the second, one can be a possible prototype of the words with the meaning 'dirt' (6. PL:b. and NPL), namely, Phil (=Philippine) lena, with reflexes Ilk lenna, Bkl lana, Bis luna. But since Conant did not gloss the reflexes, I hesitate to colligate them with the words in 6. PL:b. and NPL particularly when his reflexes under Ilk and Bis are different from those under Ilk and (Bis) Hil SamLey Seb in 6. PL:b.

In 1911 R. Brandstetter's Gemeinindonesisch und urindonesisch was published. He examined languages in "three frontier districts (Grenzdistrikte)..., Batan Islands and Formosa in the north..., the islands from Lombok to New Guinea in the east..., the chain

of islands south of Sumatra in the Southwest." He did not include the frontier district of Halmahera and the neighboring islands because their affinity to Indonesian languages is questionable (Einführung, pp. 3-4).

Brandstetter established the following sound-system of GemeinIN allowing that certain sounds are not absolutely proven to be certain: a i u ē e o; k g n; c j ŋ; t d n; p b m; y r l w; s; h (p. 14). In Brandstetter's interpretation Proto-Indonesian is not fundamentally different from the contemporary living idioms (p. 45, par. 189).

Years before Conant and Brandstetter, in 1884, J. L. A. Brandes wrote his dissertation on Bijdrage tot de Vergelijkende Klankleer der Westersche Afdeeling van de Maleisch-Polynesische Taal-familie. About two-thirds of the dissertation covers comparative phonology, the remaining third affixation and reduplication.

In 1942 my friend H. Costenoble left a manuscript, Wörterbuch des Ur-Filippinischen, an inductive reconstruction based on his comparison of four languages, Tagalog, Pampangan, Iloko and Samar-Bisaya. The Wörterbuch comprises 101 pages, typewritten single space on both sides of 8 1/2 x 10 1/2 bond paper. Based on Dempwolff's Austronesisches Wörterverzeichnis, except the Vorwort of 17 pages, the rest covers the word-list with about

6,500 entries in Ur-Filippinisch (which I abbreviate and translate PP = Proto-Philippine) with corresponding glosses, which is about three times the number of entries in Dempwolff's Wörterverzeichnis.

Costenoble follows Dempwolff's spelling in general except for his substitution of w and y for v and j. Like Brandstetter, who reconstructed s in PIN, Costenoble does the same in PP, and he reconstructs the glottal stop, for which he used ' . For reasons not clear to me, Brandstetter did not include the glottal stop in his inventory of GemeinIN sound-system (1911). In his monographs before and after 1911, he did recognize hamzah, symbolizing it with q. Dyen believes "that the reconstruction of ' where Dempwolff writes intervocalic and final h will permit a simpler treatment of phenomena found in the Philippine languages" ('The Malayo-Polynesian Word for "Two", ' Lang. 23.53, fn. 18). In a later paper, Dyen started substituting q for Dempwolff's h in any position ('Proto-Malayo-Polynesian *Z,' Lang. 27.535, fn. 3), which substitution he maintains in his subsequent publications.

Costenoble emphasizes that his PP Wörterbuch is not a finished work in any sense at all. He describes his procedure, showing what he has done and what remains to be done, hoping that eventually somebody will later expand and complete his work.

(Costenoble was a sugar chemist. He disappeared during the occupation of the Philippines while "detailed" to a sugar Central

somewhere in Central Luzon.)

7. The languages and dialects examined from the sources are:

In the PL: Aklan, Apayao, Bagobo, Bontok, BontokJ (Jenks in Scheerer's The Batan Dialect, 1908), Cuyunon, Hiligaynon, Ibanag, Ilongot, Iloko, Itawis, Itbayat, Ivatan, Kalamian, Maranao, Magindanao, Nabalo, Pinatubo Negrito, Pampangan, Pangasinan, Sagada, Samar-Leyte, Sambales, Sebu, Taosug, Tagalog, Tirurai.

In the NPL: Ami, Amboina, Atayal, Atjeh, Balinese, Bare'e, Bê, Bima, Bolaang-Mongondou, Brôu, Bugi, Buhwan, Bulu, Busang, Ceram, Cham, Chamorro (I, II, III), Chru, Ci'uli Atayal, Favorlang, Formosa, Gayo, Hova, Jarai, Javanese, Kayan-Dayak, Lampung, Lowangan, Makassar, Malay, Menadonese, Menangkabau, Malagasy, Maanjan, Nias, Ngadju-Dayak, Old Betsimisaraka, Old Javanese, Paiwan, Pazeh, Rade, Rotti, Rukai, Saisiyat, Sakalawa, Sasak, Sedik, Squli Atayal, Simalur, Siraya, Sumba, Sundanese, Tetum, Thao, Timor, Toba-Batak, Tontemboan, Tsou, Vonum, Yami.

8. The original list includes both the reflexes of Dempwolff's reconstructions and the new morphemes in the PL and NPL and dialects. To list them all here will hardly serve the purpose of this paper. They will be useful when additional data from more languages shall have become available to justify the application of PP reconstructions to PIN, or inversely of PIN to PP.

9. Dyen's term (IJAL, Memoir 19, p. 16).

10. (Old)Tag refers to Tag words found in Juan de Noceda

and Pedro San Lucar (Vocabulario de la lengua Tagala, 1860, 1st. ed. 1754), but not in Tagalog-English Vocabulary (Institute of National Language, 1940).
